

761

TORQUE WRENCH TSP SLIPPER

1-10Nm / pre-set

Use:

- > For use in all areas of assembly work where controlled tightening with low torque values is required (eg electronic hardware sector).
- > For controlled nut and bolt tightening.

Features:

- > Pre-set production torque wrench without scale.
- > Square drive with ball-locking mechanism.
- > Integrated ratchet function for bi-directional tightening.
- > In accordance with DIN EN ISO 6789, traceable to national norms.

1/4"

- > Actuation accuracy: +/-6% tolerance of the set torque.
- > Precision mechanism slides through very noticeably and audibly when the pre-set torque is achieved – over tightening is not possible.
- > Automatic resetting to the starting position.
- > Lightweight yet stable and corrosion resistant construction design.
- > ESD (electrostatic discharge) = electrostatically protected.
- > Black, non-slip rubber handgrip.
- > Supplied with a calibration certificate.
- > Unique serial number for traceability.

TORQUE WRENCH TSC SLIPPER

1-10Nm

Use:

- > For use in all areas of assembly work where controlled tightening with low torque values is required (eg electronic hardware sector).
- > For controlled nut and bolt tightening.

Features:

- > Square drive with ball-locking mechanism.
- > Integrated ratchet function for bi-directional tightening.
- > In accordance with DIN EN ISO 6789, traceable to national norms.
- > Actuation accuracy: +/-6% tolerance of the set torque.

1/4"

- > Precision mechanism slides through very noticeably and audibly when the pre-set torque is achieved – over tightening is not possible.
- > Automatic resetting to the starting position.
- > Lightweight yet stable and corrosion resistant construction design.
- > ESD (electrostatic discharge) = electrostatically protected.
- > Black, non-slip rubber handgrip.
- > Supplied with a calibration certificate.
- > Unique serial number for traceability.

TSC

TORQUE WRENCH ADJUSTABLE SLIPPER

10-90Nm

Use:

- > For use in all areas of assembly work where controlled tightening with low torque values is required (eg electronic hardware sector).
- > For controlled nut and bolt tightening.

Features:

- > Improved control of the fastening process by reducing the risk of both under and over tightening.
- > Unique slipping mechanism, which gives the operator more time to react once the target torque is reached.
- > Actuation accuracy: +/- 6% tolerance of the set torque.

1/4"

- > Maintains production output by minimising operator fatigue through the tool's ergonomic design.
- > Maximises productivity in restricted space through its compact slimline design.
- > EPA compliant for use in electrostatically sensitive applications.
- > Drive type made of stainless steel.
- > Supplied with a calibration certificate.
- > Unique serial number for traceability.
- > Accessories available.
